

NOBILE

Kites 2008

Nobile 555 4 Line Bar

20m + 5m Flying Lines
The Nobile 4 line bar comes with 20m lines and 5m extensions allowing the rider to change between long and short line set-ups whilst only having one bar. The lines also feature loop/knot ends ensuring you can not attach the lines incorrectly.

4th Line Safety
The leash line on the 4 line bar runs from the FULCRUM Quick Release up through the INOX ring and attaches to one of the front flying lines. In the event of releasing the bar the kite completely de-powers and lies in the water to one side of the window ready for immediate relaunch.

INOX Swivel
This high grade INOX swivel prevents the front flying lines becoming twited when spinning the bar after manoeuvres.

Emergency Kill Handle
Grabbing this handle and letting go of the kite will kill all the power in an emergency. It can also be used for self landing the kite.

De-power Stopper
Our stopper has been designed to hold the bar at the desired distance from you yet still be easy to move quickly. Both the de-power line and the leash line pass through the stopper to minimize wear.

Safety Leash with QR
The safety leash features a quick release for use in emergencies. Placing it close to the Eva foam protector eliminates the chance of it opening through water pressure only.

Central Bar Insert
At the centre of the Nobile carbon bar is an INOX mold that reduces de-power line wear to a minimum and due to its internal shaping decreases the pressure needed to turn the kite. The mold form is such that the FULCRUM Quick Release inserts into it ensuring the loop is always facing you during un-hooked moves.

Power Adjuster Strap
The power strap features a pull/pull configuration to ensure ease of use, the de-power toggle is clearly marked in red and features a velcro strap to stop it flapping around when fully applied. The re-power toggle is covered in PVC tubing to make it easier to pull.

Line float and Protector
The EVA foam floats help to keep the bar floating in the water and also protect your fingers from becoming wrapped up in the pre lines.

Ergo Grip Bar
Wrapped in super comfy EVA foam the Nobile bar features ERGO shaping for enhanced grip.

Nobile Bar Ends
Our bar ends have been designed from scratch for practicality and function. The inside of the cap is made in soft silicone to protect your hands and colour coded to make bar direction easily recognizable. Ample space has been supplied to ensure all the flying lines and lead lines can be tidily stored around the bar at the end of your session without fear of tangles. The steering lines have two options for attachment on the bar end allowing one bar to adjust to either 48cm or 54cm length ensuring the owner can adapt their kites turning speed to their own preference.
