POWER >> FREEDOM

access 2 power >> freedom

The Philosophy for the design of the Access 2 remained the same as it was in 2005; provide the best value open-celled depowerable kite that a first time rider can take anywhere with ease and safety. The Access demands ultimate stability to handle the funkiest conditions from the backyard to the backcountry no matter where you choose to ride, yet it delivers Ozone's signature feeling of power and finesse for control in every situation.

The Access 2 offers the most logical choice for anyone seeking a personal ski-lift that fits in a pack, the Access is the gateway to the new world of winter travel. With customer feedback we have improved all areas of the Access2 design with extra cells to improve the performance, the Frenzy clamcleat trimmer system and the Frenzy spectra speed system

The Access is the perfect kite for beginners to intermediates and opens the door to a world of possibilities for all kite sports including snowkiting, back country skiing, land boarding or buggying.

Features >>

- Your lift pass to the backcountry.
- The mountain climber.
- Amazing "price point" value.
- Keeps your feet on the snow as you climb the mountain.
- Use hooked in with depower or un-hooked for learning the basic kite skills.
- Rock solid stability in gusty conditions.
- Huge Depower range - Speed system provides amazing progressive power increase ability with gust spilling depower
- Trimmer added to the Access 2 bar system (same as Frenzy 07)
- Improved performance with 2 extra cells for a cleaner profile
- Simple and easy to launch or land without assistance - Just un-wind, hook in and GO
- New brake fan design to ensure a cleaner and easier landing stall than the O6 kites
- Light bar pressure with direct and responsive handling
- Carbon bar with Ozone's legendary leash-less safety system design giving you 100% peace of mind in an emergency.
- Chicken loop with safety release handle
- Technical backcountry pack
- Highest quality materials with bullet proof re-enforcement
- "Butt hole" - Velcro opening in the outside cells to allow easy removal of debris

The ACCESS comes ready-to-fly, complete with carbon control bar, leash-less riding safety system, safety leash for non depower flying mode, 4 x 25m SK75 RED Dyneema lines to be easily seen on snow, repair kit, detailed manual, stickers, key-ring and innovative carry bag.

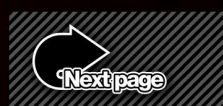

For your own safety and enjoyment, it is important that you read and understand the supplied manual before use!

Sizes

4m², 6m², 8m², 10m²

Materials

Ozone 40D rip-stop nylon, Edelrid SK 75 x 4-lines
Sleeved Dyneema bridle lines >> for ultimate security

ozone bar systems

Ozone has been leading the industry since launching the original Frenzy in 2002, the Worlds 1st open celled de-powerable foil. Since then we have been at the forefront of the snowkite revolution with the world's best designers and riders ensuring we stay committed to the safe and enjoyable development of the snowkite World.

In 2005 we released the Frenzy05 with the 1st leash-less re-ride safety release. This meant that riders did not need a leash to stay connected to your kite in an emergency. The easy to grab handle that is just as easy to re-connect allows you to land your kite with ease. In an emergency you can feel 100% confident that you can rapidly stall the kite when you need to. The fact that you have no leash means you can spin as many times as you like without any hassle or tangles.

One other very important but often overlooked difference with our bar systems is the high build and material quality. We use only the finest Amsteel spectra leaders, speed systems and the best pulleys available to ensure that your safety is not compromised and we manufacture to the same certified paragliding standards at our own factory. No compromise for your safety

ozone re-ride safety system >>stall

ozone clamcleat trimmer system

Ozone Bar System Features >>

- Clamcleat Trimmer – Reliable, Smooth
- Trimmer
- Composite bar & bar ends >> Load tested to 300KG
- Colour coded EVA foam bar grip

- Easy to grab stall/brake handle
- Ronstan 300kg pulley with backup stainless ring
- Wear-Proof Chicken loop line by "BEAL"
- Colour Coded flying SK 75 Flying lines 25m x 4
- Line labels for fool-proof line connection

quality because it counts

Quality is a word that gets used a lot in kiting. At Ozone, we don't use it lightly. When we use it, we mean it. We're proud of our design and manufacturing and believe they set a precedent for the rest of the industry.

Quality begins with design: at Ozone, a quality design results in a kite that handles as well as possible, combined with the highest level of performance and safety.

Choosing materials: this is a simple issue, when we choose materials, we base our decision solely upon the fact that the materials we use are the best available for the job.

Kite production: all Ozone kites are manufactured in our own facility. We have total control over every aspect of the manufacturing process, and each kite is fully inflated and inspected to certified paragliding standards before leaving our DHV-approved factory.

Product testing: your kite has undergone thousands of hours of development, from CAD design through to riding in extreme conditions. Our riders and design team are out testing all year round in temperatures of -40°C in Norway to the baking heat and sand blasts of Chile.
